

CSCI 234 – Software Engineering  
Sprint Retrospective Review

Name: Christine Colvin

Team Name: Group 7 Sprint Number: 1

Reflect on the last sprint. In order to improve your team's performance, record your thoughts about what the team should start doing, stop doing, and continue doing. Use back of this sheet and/or other sheets of paper if you need more space for your comments.

START DOING:

We should start planning a more concise and accurate time for us to all meet in order for the work to get done properly and on time in order for other members to review it and maybe edit or comment. This will be beneficial in order to get tasks done in a timely manner.

STOP DOING:

Leaving buggy code or issues without letting other members know or at least finishing what we start in a coding session in order to not confuse members—allow other members to be aware of the git commit/pushes so they can pull them before working on it.

CONTINUE DOING:

Continue to help each other and work together in order to not allow other teammates to fall behind or work with bad code

ANY OTHER COMMENTS:
